

Order Picker Attachments

Attachment for Order Picker - Order preparation operation or order picking as it is more usually known is a process utilized in warehouse operations and comprises employees referred to as order pickers. The order picker's job is to collect and take articles in specific quantities so as to accomplish the customer's orders previous to shipment. Order picking is a basic warehousing process. The effectiveness in which this particular task is done can be directly linked to the productivity of a supply chain. Therefore, order picking is among the most controlled logistic methods. Order picking falls within the category of the warehouse management system.

There are specific kinds of order picking which comprise: pick to box method, wave picking method, piece picking or picker to part method, sorting systems method and zone picking method.

The pick to box method consists of the order picker only filling the boxes with stuff which are from their particular station. The box then moves on to other locations to until the order is complete. In this particular process, there is no movement of the order picker staff. In the wave picking method, the order pickers move around to be able to collect the required items for several orders. The piece picking or picker to part method is similar where the order pickers or picker move so as to gather the stuff required but for one order only.

In the sorting systems method, there is no movement of the order picking staff. Instead, the products are delivered to her or him via an automated system like for instance automatic storage or a conveyor system. In the zone picking method, every order picker is assigned to one particular zone. They are responsible for only realizing order picking in this specific area.
