

Forklift Fork Positioner

Forklift Fork Positioner - The fork positioner is a hydraulic apparatus which can allow the driver to be able to work the forklift without leaving the seat. They are constructed out of high quality materials and are intended to be able to withstand the most challenging operations and work environments. Side shifting units have the extra ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate carrying and placement in a quicker and much more effective manner.

The blade pocket is rather unique and enables the one operating it to be able to safely swing the forks into position without any fear of damaging the positioning cylinders. This could allow the driver the choice to perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be converted into blade positioners on existing units.
