

## Doosan Forklift Part

Doosan Forklift Parts - Doosan Infracore Company Ltd. is a transnational company consisting of Diesel Engines, Defense Industry goods, Industrial Vehicles, Construction Technologies and Machine Tools and Computerization Systems.

In the United States, Doosan Infracore America Corporation is headquartered in Suwanee, Georgia. It is home to a 170,000 square foot manufacturing facility, which is the home of the Compact Equipment and Construction division. West Caldwell, New Jersey is home to the Machine Tool division and Cleveland, El Paso is home to the Forklift division. The U.S. headquarters in Georgia facilitates a first rate parts operation capable of supplying an excess of 25,000 line items to support Lift Truck, Compact Equipment, Machine Tool and Construction client requirements.

There are well over 220 Doosan service and product sales locations operating in Canada and the United States. Also, there are more than 90 independent sellers moving lift truck equipment and materials handling equipment. This network helps Doosan Infracore America to aggressively compete in this competitive marketplace. The lift truck product line remarkably includes 63 distinctive versions consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion lift trucks. Capacities of these numerous vehicle designs vary from 3,000 to 33,000 lbs. All trucks are designed in an ISO 9001 certified facility.

Doosan Infracore America is the fastest rising forklift and lift truck corporation in the North American market, thanks to its outstanding level of product performance and their persistently high level of consumer support and service given to all Doosan Infracore Forklift clients. The U.S. lift Truck division based in Cleveland has a skilled team experienced in Sales, Purchasing, Marketing, Logistical and Technical Support.

In the beginning the home-based lift truck marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled forklifts as part of a home-based equipment expansion venture. Product sales of these goods were initially targeted to state-run corporations, large scale organizations, and the armed forces. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical instruction became the new focus for enhancing quality and product development.

Home-based forklift business for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's progressive technological improvements combined with sales success placed them in a position of considerable growth of their forklift operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the highly competitive North American materials handling industry. This project proved highly successful for Daewoo and their forklift product sales expanded greatly. In 1984, the company completed development of a new facility to help in producing high end value-added goods for export. In 1993, the corporation had a international sales network and started exporting models they had developed through in-house technology, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas markets.
